Term hours subtotal:	12	

This progression plan is a tool for advisors to help students plan for the pre-requisite requirements the Diagnostic Medical Sonography Program will be looking for. Completion of this plan in addition to the DMS program should allow students to earn an associate's degree.

Prerequisite Coursework Requirements:

All prerequisite coursework must be completed prior to the start of the program. Students may apply while coursework is in progress; however, they are responsible for working with an advisor to ensure they are enrolled in the appropriate courses.

Completion of a two-year allied health education program in a patient care-related field or a bachelor's degree in any discipline is preferred and may be used to satisfy prerequisite coursework requirements. The following course areas must be completed prior to program entry regardless of whether it was completed as part of an earned or transferred degree. All math and science coursework must meet a 10-year recency requirement.

Anatomy & Physiology

- BIO160 Introduction to Anatomy & Physiology OR BIO 201 Human Anatomy and Physiology 1

Mathematics

- MAT152 College Algebra OR any mathematics course for which College Algebra is a prerequisite

Ethics (Healthcare or Professional)

- PHI204 Medical Ethics OR an equivalent ethics course from a regionally accredited institution

Courses must be completed with a grade of B or higher. Course equivalencies are determined through the official transcript evaluation process.

****Note:** a 2-year allied health education program that is patient care related is defined as: 24 full-time consecutive calendar months or 60 semester credits from a regionally accredited institution. Students who do not hold an associate degree in a patient-care related field at the time of admission may still enter the Diagnostic Medical Sonography Certificate Program; however they will be required to obtain eligibility for the ARRT Sonography Examination prior to applying for the ARDMS credentialing examinations.
