

Turnitin's AI Writing Detection

Feature guidance

Feature Guidance When Using AI Detection Natively

The screenshot shows the Turnitin submission page. At the top left is the Turnitin logo. Below it is a navigation bar with tabs for Assignments, Students, Grade Book, Libraries, Calendar, Discussion, and Preferences. The breadcrumb trail reads "NOW VIEWING: HOME > BUSINESS > BUSINESS WRITING". The main content area is titled "Submit: Single File Upload" with a progress indicator showing "STEP 1" of three steps. The form includes fields for Author (a dropdown menu set to "Non-enrolled student"), First name (text input with "Cleo"), Last name (text input with "Robbins"), and Submission title (text input with "My English"). A light blue informational message states: "The file you are submitting will not be added to any repository." Below this is a section titled "What can I submit?" containing a file upload area with a file named "Copy_of_Sample_2_Essay_on_my_English30pc_AI_with_Similarity" and a "Clear file" button. At the bottom, there is a privacy notice: "We take your privacy very seriously. We do not share your details for marketing purposes with any external companies. Your information may only be shared with our third party partners so that we may offer our service." and two buttons: "Upload" and "Cancel". A blue arrow points to the "Upload" button.

- We've added AI writing detection to the Similarity Report
- To use it, you need to follow your usual Similarity checking workflow - both native or via an LMS

Step 1:

- Upload the document you'd like to check for AI writing
- Note: We're able to detect AI writing for documents submitted in English only

NOW VIEWING: HOME > BUSINESS > BUSINESS WRITING

About this page

This is your assignment inbox. To view a paper, select the paper's title. To view a Similarity Report, select the paper's Similarity Report icon in the similarity column. A ghosted icon indicates that the Similarity Report has not yet been generated.

The Goliath of the Sea

The majestic blue whale, the goliath of the sea, certainly stands alone within the animal kingdom for its adaptations beyond its massive size. At 30 meters (98 ft) in length and 190 tons (210 short tons) or more in weight, it is the largest existing animal and the heaviest that has ever existed. Despite their incomparable mass, aggressive hunting in the 1900s by whalers seeking whale oil drove them to the brink of extinction. But here are other reasons for why they are now so endangered.

Blue-Whale Balaenoptera Musculus

The blue whale's common name derives from bluish-hue that covers the upper side of its body, while its Latin designation is *Balaenoptera musculus*. The blue whale belongs to the Mysticeti suborder of cetaceans, also known as baleen whales, which means they have fringed plates of fingernail-like material, called baleen, attached to their upper jaws. Blue whales feed almost exclusively on krill, though they also take small numbers of copepods. An adult blue whale can eat up to 40 million krill in a day.

These gargantuan beasts used to dominate all the oceans of the Earth up until the late nineteenth century, when the technology was developed to effectively hunt and harvest them. In 1864, the Norwegian Svend Foyn equipped a steamboat with harpoons specifically designed for catching large whales. This led to the killing of hundreds of thousands of whales up until 1966, when the International Whaling Commission banned the practice.

The Goliath of the Sea

The majestic blue whale, the goliath of the sea, certainly stands alone within the animal kingdom for its adaptations beyond its massive size. At 30 meters (98 ft) in length and 190 tons (210 short tons) or more in weight, it is the largest existing animal and the heaviest that has ever existed. Despite their incomparable mass, aggressive hunting in the 1900s by whalers seeking whale oil drove them to the brink of extinction. But there are other reasons for why they are now so endangered.

Blue-Whale *Balaenoptera Musculus*

The blue whale's common name derives from bluish-hue that covers the upper side of its body, while its Latin designation is *Balaenoptera musculus*. The blue whale belongs to the Mysticeti suborder of cetaceans, also known as baleen whales, which means they have fringed plates of fingernail-like material, called baleen, attached to their upper jaws. Blue whales feed almost exclusively on krill, though they also take small numbers of copepods. An adult blue whale can eat up to 40 million krill in a day.

These gargantuan beasts used to dominate all the oceans of the Earth up until the late nineteenth century, when the technology was developed to effectively hunt and harvest them. In 1864, the Norwegian Svend Foyn equipped a steamboat with harpoons specifically designed for catching large whales. This led to the killing of hundreds of thousands of whales up until 1966, when the International Whaling Commission banned the practice.

The blue whale certainly appears grand in size and beauty, but the sounds it produces and how it communicates are also sublime. Amazingly, their vocalizations can reach 155 and 188 decibels and have a frequency range of 10 to 40Hz. Though they typically do not "sing" in the same way that Humpback whales do, some subspecies have been observed producing songs that consist of up to four notes. Blue whale calls are still not fully understood, and scientists are currently working on determining their purposes. Among the hypotheses, researchers believe the calls could serve to determine one's geographic location, identify individuals, or locate prey.

In this regard, blue whales exhibit the capability to use echolocation, which is the same as active sonar using sounds made by the animal itself. The identifying of distance and location is done by measuring the time delay between the animal's own sound emission and any echoes that return from the environment. The relative strength of the sound received at each ear as well as the time delay between arrival at the two ears provide information about the horizontal angle from which
